Risk Profile of the Scheme

Standard Risk Factors:

- Investment in mutual fund units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- Mutual funds and securities investments are subject to market risks and there is no assurance or guarantee against loss in the Scheme or that the Scheme's objective will be achieved.
- As the price / value / interest rate of the Securities in which the Scheme invests fluctuates, the value of a Unit Holder's investment in the Scheme may go up or down.
- As with any investment in securities, the NAV of the Units can go up or down depending on various factors and forces affecting capital markets.
- Past performance of the Sponsor / AMC / Mutual Fund does not indicate the future performance of the Scheme.
- Investors in the Scheme are not being offered a guaranteed or assured rate of return.
- JPMorgan India Corporate Debt Opportunities Fund is the name of the Scheme, and does not in any manner indicate the quality of the Scheme or its future prospects and returns.
- The Sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of ₹ 1,00,000/- (One Lakh Rupees only) made by it towards setting up the Mutual Fund.

Scheme Specific Risk Factors:

Risk associated with investing in Bonds

- The NAV of the Scheme, to the extent invested in Debt Securities, will be affected by changes in the general level of interest rates. The NAV of the Scheme would be expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- Debt Securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the investment by the Scheme and may lead to the Scheme incurring losses until the Security is sold.

- The AMC may, considering the overall level of risk of the portfolio, invest in lower rated Debt Securities offering higher yields.
- The liquidity of investments made by the Scheme may be restricted by trading volumes and settlement periods. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The Trustee has the right, in its sole discretion to limit Redemptions (including suspending Redemption) in certain circumstances [outlined in 'Restrictions on Redemptions']. There may be temporary periods when the monies of the Scheme are un-invested and no return is earned thereon. The inability of the Scheme to make intended Securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. By the same token, the inability to sell Debt Securities held in the Scheme's portfolio due to the absence of a well-developed and liquid secondary market for Debt Securities could result, at times, in potential losses to the Scheme, should there be a subsequent decline in the value of the Debt Securities held in the Scheme's portfolio.
- The liquidity and valuation of a Scheme's investments due to its respective holdings of unlisted Debt Securities may be affected if they have to be sold prior to their target date of divestment.
- Debt Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to Debt Securities that are listed on the exchanges or offer other exit options to the investor, including a put option. Within the regulatory limits, the AMC may choose to invest in unlisted Debt Securities that offer attractive yields.
- While Debt Securities that are listed on a stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges. Money Market Instruments, while fairly liquid, lacks a well-developed secondary market, which may restrict the selling ability of a Scheme and may lead to the Scheme incurring losses till the Security is finally sold.
- Debt Securities, as well as Money Market Instruments, are subject to the risk of an issuer's inability to meet interest and principal payments on its debt obligations (credit risk) and market perception of the creditworthiness of the issuer of instruments. Credit risk or default risk refers to the risk which may arise due to default on the part of the issuer of the fixed income security (i.e., the issuer will be unable to make timely principal and interest payments on the security). Because of this risk debentures are sold at a yield spread above those offered on treasury securities, which are sovereign obligations and generally considered to carry less risk. Normally, the value of a fixed income security will fluctuate depending upon the actual changes in the perceived level of credit risk as well as the actual event of default. These securities may also be subject to price volatility due to factors such as, amongst others, changes in interest rates, general level of market liquidity and market perception of the creditworthiness of the issuer (market risk). The liquidity risk refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is characteristic of the Indian fixed income market. The AMC will endeavor to manage credit risk through in-house credit analysis. The Scheme may also, but is not obliged to, use various hedging products from time to time, as are available and permitted by SEBI, to attempt to reduce the impact of undue market volatility on a Scheme's portfolio. There is no guarantee that hedging techniques will achieve the desired result.
- The investments made by the Scheme are subject to reinvestment risk. This risk refers to the interest rate levels at which cash flows received from the Debt Securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed. The risk refers to the fall in the rate for reinvestment of interim cash flows.
- To the extent the Scheme's investments are in floating rate debt instruments or fixed debt instruments swapped for floating rate return, they will be affected by interest rate movement (basis risk) - coupon rates on floating rate securities are reset periodically in line with the benchmark index movement. Normally, the interest rate risk inherent in a floating rate instrument is limited compared to a fixed rate instrument. Changes in the prevailing level of interest rates will likely affect the value of a Scheme's holdings until the next reset date and thus the value of the Units of such Scheme. The value of Debt Securities held by a Scheme generally will vary inversely with changes in prevailing interest rates. Scheme could be exposed to interest rate risk:
 - (i) due to the time gap in the resetting of the benchmark rates, and
 - (ii) to the extent the benchmark index fails to capture interest rate changes appropriately (spread risk): though the basis (i.e. benchmark) gets readjusted on a regular basis, the spread (i.e. markup) over benchmark remains constant. This can result in some volatility to the holding period return of floating rate instruments.
- **Settlement Risk (counterparty risk):** Specific floating rate assets may also be created by swapping a fixed return into a floating rate return. In such a swap, there is the risk that the counterparty (who will pay the floating rate return and receive the fixed rate return) may default;
- **Liquidity Risk:** The market for floating rate Securities is still in its evolutionary stage and therefore may render the market illiquid from time to time, in relation to such Securities that the Scheme is invested in.
- **Prepayment Risk:** The borrower/issuer of security may prepay the receivables prior to their respective due dates. This may result in change in the yield and tenor for investments of the Scheme.
- Different types of Securities in which the Scheme may invest as described in this SID carry different levels and types of risk. Accordingly the Scheme's risk may increase or decrease depending upon its investment pattern. E.g. corporate bonds carry a higher amount of risk than Government of India Securities. Further even among corporate bonds, bonds which are rated AAA are comparatively less risky than bonds which are AA rated.

Risks associated with investing in Money Market Instruments

- Investments in Money Market Instruments would involve a moderate credit risk, i.e. risk of an issuer's inability to meet the principal payments.
- Money Market Instruments may also be subject to price volatility due to factors such as changes in interest rates, general level of market liquidity and market perception of credit worthiness of the issuer of such instruments.
- The NAV of Units, to the extent that the Scheme is invested in Money Market Instruments, will be affected by changes in the level of interest rates. When interest rates in the market rise, the value of a portfolio of Money Market Instruments can be expected to decline.

Risks associated with investing in Derivatives

The Scheme may use derivatives in connection with its investment strategies.

- Derivatives products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the Fund Manager involve uncertainty and decisions of a Fund Manager may not always be profitable. No assurance can be given that the

Fund Manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

- As and when the Scheme trades in derivative products, there are risk factors and issues concerning the use of derivatives that investors should understand. Derivatives require the maintenance of adequate controls to monitor such transactions and the embedded market risks that a derivative adds to the portfolio.

Besides the price of the underlying asset, the volatility, tenor and interest rates affect the pricing of derivatives.

Other risks in using derivatives include but are not limited to:

- (a) **Credit Risk:** This occurs when a counterparty defaults on a transaction before settlement and therefore, the Scheme is compelled to negotiate with another counterparty at the then prevailing (possibly unfavourable) market price, in order to maintain the validity of the hedge.
- (b) **Market Liquidity Risk:** This is where the derivatives cannot be sold (unwound) at prices that reflect the underlying assets, rates and indices.
- (c) **Model Risk:** This is the risk of mis-pricing or improper valuation of derivatives.
- (d) **Basis Risk:** This is when the instrument used as a hedge does not match the movement in the instrument / underlying asset being hedged. The risks may be inter-related also; for e.g. interest rate movements can affect equity prices, which could influence specific issuer / industry assets.

Risks associated with Short Selling and Securities Lending

The risks in lending portfolio Securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of Securities, i.e. the Scheme, and the approved intermediary. Such failure to comply can result in a possible loss of rights in the collateral put up by the borrower of the Securities, the inability of the approved intermediary to return the Securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the Securities deposited with the approved intermediary. The Scheme may not be able to sell such Securities and this can lead to temporary illiquidity.

Risks associated with investing in Securitized Debt

Generally available asset classes for securitization in India:

- Commercial vehicles
- Auto and two wheeler pools
- Mortgage pools (residential housing loans)
- Personal loan, credit card and other retail loans
- Corporate loans / receivables

In terms of specific risks attached to securitization, each asset class would have different underlying risks, however, residential mortgages typically have lower default rates as an asset class. On the other hand, repossession and subsequent recovery of commercial vehicles and other auto assets is normally easier and better compared to mortgages. Some of the asset classes such as personal loans, credit card receivables etc., being unsecured credits in nature, may witness higher default rates. As regards corporate loans / receivables, depending upon the nature of the underlying security for the loan or the nature of the receivable the risks would correspondingly fluctuate. However, the credit enhancement stipulated by rating agencies for such asset class pools is typically much higher and hence their overall risks are comparable to other AAA or equivalent rated asset classes.

Some of the factors, which are typically analyzed for any pool, are as follows:

Size of the loan: this generally indicates the kind of assets financed with loans. Also indicates whether there is excessive reliance on very small ticket size, which may result in difficult and costly recoveries. To illustrate, the ticket size of housing loans is generally higher than that of personal loans. Hence in the construction of a housing loan asset pool for say ₹ 1,00,00,000/- (One Crore Rupees) it may be easier to construct a pool with just 10 housing loans of ₹ 10,00,000/- (Ten Lakh Rupees) each rather than to construct a pool of personal loans as the ticket size of personal loans may rarely exceed ₹ 5,00,000/- (Five Lakh Rupees) per individual.

Average original maturity of the pool: this indicates the original repayment period and whether the loan tenors are in line with industry averages and borrower's repayment capacity. To illustrate, in a car pool consisting of 60 month contracts, the original maturity and the residual maturity of the pool viz. number of remaining installments to be paid gives a better idea of the risk of default of the pool itself. If in a pool of 100 car loans having original maturity of 60 months, more than 70% of the contracts have paid more than 50% of the monthly installments and if no default has been observed in such contracts, this pool should have a lower probability of default than a similar car loan pool where 80% of the contracts have not yet paid 5 installments.

LTV: indicates how much of the value of the asset is financed by borrower's own equity. The lower the LTV, the better it is. This ratio stems from the principle that where the borrower's own contribution of the asset cost is high, the chances of default are lower. To illustrate: for a truck costing ₹ 20 lakhs, if the borrower has himself contributed ₹ 10 lakhs and has taken ₹ 10 lakhs as a loan, he is going to have lesser propensity to default as he would lose an asset worth ₹ 20 lakhs if he defaults in repaying an installment. This is as against a borrower who may meet only ₹ 2 lakhs out of his own equity for a truck costing ₹ 20 lakhs. Between the two scenarios given above, as the borrower's own equity is lower in the latter case, it would typically have a higher risk of default than the former.

Average seasoning of the pool: this indicates whether borrowers have already displayed repayment discipline. To illustrate, in the case of a pool of personal loans, if a pool of assets consist of borrowers who have already repaid 80% of the installments without default, the probability of default is lower than for a pool where only 10% of installments have been repaid.

Default rate distribution: this indicates how much % of the pool and overall portfolio of the originator is current, how much is in 0-30 DPD (days past due), 30-60 DPD, 60-90 DPD and so on. The rationale here is that, as against 0-30 DPD, the 60-90 DPD is a higher risk category. Unlike in plain vanilla instruments, in securitization transactions it is possible to work towards a target credit rating, which could be much higher than the originator's own credit rating.

In the Indian scenario, also, more than 95% of issuances have been AAA or equivalent rated issuances indicating the strength of the underlying assets as well as adequacy of credit enhancement.

Investment exposure of the Scheme with reference to Securitized Debt

- The Scheme will predominantly invest only in those securitization issuances which have AAA or equivalent rating indicating the highest level of safety from credit risk point of view at the time of making an investment. The Scheme will not invest in foreign securitized debt.
- The Scheme may invest in various types of securitization issuances, including but not limited to asset backed securitization, mortgage backed securitization, personal loan backed securitization, collateralized loan obligation / collateralized bond obligation and so on.
- The Scheme does not propose to limit its exposure to only one asset class or to have asset class based sub-limits as it will primarily look towards the AAA or equivalent rating of the offering.
- The Scheme will conduct an independent due diligence on the cash margins, collateralization, guarantees and other credit enhancements and the portfolio characteristic of the securitization to ensure that the issuance fits into the overall objective of the investment in high investment grade offerings irrespective of underlying asset class.

Risks associated with investing in Securitized Papers

- Types of securitized debt vary and carry different levels and types of risks. Credit risk on securitized bonds depends upon the originator and varies depending on whether they are issued with recourse to the originator or otherwise. Even within securitized debt, AAA or equivalent rated securitized debt offers lesser risk of default than AA rated securitized debt. A structure with recourse will have a lower credit risk than a structure without recourse.
- As underlying assets in securitized debt may assume different forms and the general types of receivables include auto finance, credit cards, home loans or any such receipts, credit risks relating to these types of receivables depend upon various factors including macro economic factors of these industries and economies. Specific factors like nature and adequacy of property mortgaged against these borrowings, nature of loan agreement / mortgage deed in case of home loan, adequacy of documentation in case of auto finance and home loans, capacity of borrower to meet its obligation on borrowings in case of credit cards and the intention of the borrower influence the risks relating to the asset borrowings underlying the securitized debt.
- Changes in market interest rates and pre-payments may not change the absolute amount of receivables for the investors, but may have an impact on the reinvestment of the periodic cash flows that the investor receives in the securitized paper.

Limited Liquidity & Price Risk

Presently, the secondary market for securitized papers is not very liquid. There is no assurance that a deep secondary market will develop for such securities. This could limit the ability of the Scheme to resell them. Even if a secondary market develops and sales were to take place, these secondary transactions may be at a discount to the initial issue price due to changes in the interest rate structure.

Risks due to possible prepayments: Weighted Tenor / Yield

Asset securitization is a process whereby commercial or consumer credits are packaged and sold in the form of financial instruments. Full prepayment of underlying loan contract may arise under any of the following circumstances:

- obligor pays the receivable due from him at any time prior to the scheduled maturity date of that receivable; or
- receivable is required to be repurchased by the seller consequent to its inability to rectify a material misrepresentation with respect to that receivable; or
- the servicer recognizing a contract as a defaulted contract and hence repossessing the underlying asset and selling the same.
- In the event of prepayments, investors may be exposed to changes in tenor and yield.

Bankruptcy of the originator or seller

If the originator becomes subject to bankruptcy proceedings and the court in the bankruptcy proceedings concludes that the sale from originator to the trust created for the purposes of securitization process, was not a sale then the Scheme could experience losses or delays in the payments due. All possible care is generally taken in structuring the transaction so as to minimize the risk of the sale to the trust created for the purposes of securitization process, not being construed as a "True Sale". Legal opinion is normally obtained to the effect that the assignment of receivables to the trust created for the purposes of securitization process for the benefit of the investors, as envisaged herein, would constitute a true sale.

Bankruptcy of the investor's agent

If an investor's agent becomes subject to bankruptcy proceedings and the court in the bankruptcy proceedings concludes that the recourse of the investor's agent to the assets / receivables is not in its capacity as agent / bankruptcy trustee but in his personal capacity, then

an investor could experience losses or delays in the payments due under the swap agreement. All possible care is normally taken in structuring the transaction and drafting the underlying documents so as to provide that the assets / receivables if and when held by an investor's agent is held as agent and in trust for the investors and shall not form part of the personal assets of the investor's agent. Legal opinion is normally obtained to the effect that the investors agent's recourse to assets / receivables is restricted in his capacity as agent and trustee and not in its personal capacity.

Credit Rating of the Transaction / Certificate

The credit rating is not a recommendation to purchase, hold or sell the certificate evidencing title to the securitized debt in as much as the ratings do not comment on the market price of the certificate or its suitability to a particular investor. There is no assurance by the rating agency either that the rating will remain at the same level for any given period of time or that the rating will not be lowered or withdrawn entirely by the rating agency.

Risk of Co-mingling

The servicers normally deposit all payments received from the obligors into the collection account. However, there could be a time gap between collection by a servicer and depositing the same into the collection account especially considering that some of the collections may be in the form of cash. In this interim period, collections from the loan agreements may not be segregated from other funds of the servicer. If the servicer fails to remit such funds belonging to the investors, the investors may be exposed to a potential loss. Due care is normally taken to ensure that the servicer enjoys the highest credit rating on a standalone basis to minimize co-mingling risk.

Currency Risk

The foreign securities are issued and traded in foreign currencies. As a result, their values may be affected by changes in the exchange rates between foreign currencies and the Indian Rupees as well as between currencies of countries other than India. Restrictions on currency trading that may be imposed by developing market countries will have an adverse effect on the value of the securities of companies that trade or operate in such countries.

Risks associated with Overseas Investment

Subject to necessary approvals and within the investment objectives of the Scheme, the Scheme may invest in overseas markets which carry risks related to fluctuations in the foreign exchange rates, the nature of the securities market of the country, restrictions on repatriation of capital due to exchange controls and the political environment. Further the repatriation of capital to India may also be hampered by and changes in Regulations or political circumstances. In addition, country risks would include events such as introduction of extraordinary exchange controls, economic deterioration, bi-lateral conflict leading to immobilization of overseas financial assets and the prevalent tax laws of the respective jurisdiction for the execution of trades or otherwise.

Other Risks

Investments in the Scheme made in foreign currency by a Unit Holder are subject to the risk of fluctuation in the value of Indian Rupee.

Restrictions on Redemptions:

After obtaining board approval the Trustee and the AMC may restrict redemptions in the Scheme when there are circumstances leading to a systemic crisis or event that severely constricts market liquidity or the efficient functioning of markets such as:

- (a) **Liquidity issues** - when the market at large becomes illiquid affecting almost all securities rather than any issuer specific security.
- (b) **Market failures, exchange closures** - when markets are affected by unexpected events which impact the functioning of exchanges or the regular course of transactions. Such unexpected events could also be related to political, economic, military, monetary or other emergencies.
- (c) **Operational issues** - when exceptional circumstances are caused by force majeure, unpredictable operational problems and technical failures (eg a black out).

In the event redemptions are restricted, such restriction may be imposed for a specific period of time not exceeding 10 working days in any 90 day period and the restriction on redemption shall not apply to redemption requests up to 2 lakh. Where redemption requests are above 2 lakh, the AMC shall redeem the first 2 lakh without such restriction and remaining part over and above 2 lakh shall be subject to such restriction.

As per SEBI circular no. SEBI/HO/IMD/DF2/CIR/P/2016/57 dated May 31, 2016 such restriction on redemption will be applicable to the Scheme with effect from July 1, 2016.

US Tax Withholding and Reporting under the Foreign Account Tax Compliance Act ("FATCA")

Under the FATCA provisions of the US Hiring Incentives to Restore Employment ("HIRE") Act, 30% US withholding will be levied on certain US sourced income received after December 31, 2014 (for the Scheme, principally dividends and interest paid by US corporations and institutions including the US Government) and after December 31, 2016 on the gross proceeds of sales of the US assets giving rise to that US sourced income (for the Scheme, principally equity and debt securities issued by US corporations and institutions including the US Government) unless the Scheme complies with FATCA. Additionally, from January 1, 2017 the operation of these rules may be significantly expanded under what is being called "foreign passthru payments" rules under FATCA to include certain payments from non-US parties; however, such rules have yet to be released. FATCA compliance can be achieved by entering into an Foreign Financial Institution ("FFI") agreement with the US Internal Revenue Service ("IRS") under which the Scheme agrees to certain US tax reporting with respect to the holdings of and payments to certain investors in the Scheme (such as "Specified US Person" as defined in the Treasury Regulations under FATCA, or certain non-US entities with one or more Specified US Person(s) as owner(s) with a greater-than-10% interest - please refer to "Who cannot Invest" under Section III of this SID), and possible withholding requirements on payments made to certain investors (beginning in or after 2017 under foreign passthru payments rules, if implemented). However, the form of the FFI agreement has not yet been provided by the US Government. In addition, there may be Intergovernmental Agreements that could impact upon the Scheme's compliance with FATCA. Any amounts withheld under FATCA may not be refundable by the IRS.

The Scheme currently intends to be FATCA-compliant. However, this cannot be assured given the complexity of the FATCA requirements. If a Scheme is unable to satisfy the obligations imposed on it to avoid the imposition of FATCA withholding, certain US sourced payments made to the Scheme may be subject to a 30% FATCA withholding tax, which could reduce the cash available for investors. Prospective investors should consult their own advisors regarding the possible implications of FATCA on their investment in the Scheme and the information that may be required to be provided and disclosed to JPMorgan Asset Management India Private Limited and distributors, and in certain circumstances to the IRS. The application of the withholding rules and the information that may be required to be reported and disclosed are subject to change.

Any discussion of United States federal income tax considerations set forth in this SID was written in connection with the promotion and marketing of the Units by the Funds and JPMorgan Asset Management India Private Limited. Such discussion is not intended or written to be tax advice to any person and is not intended or written to be used, and cannot be used, by any person for the purpose of avoiding any United States federal tax penalties that may be imposed on such person. A prospective investor should seek advice based on its particular circumstances from its own tax advisor.

In view of the above and as per investment objective, investment in the Scheme should be regarded as long term in nature. The Scheme is, therefore, only suitable for investors who can afford the risks involved.

Scheme Plans

The Scheme offers two plans - Regular Plan and Direct Plan.

Scheme Options and Dividend Policy

Each Plan offers two options - growth option and dividend option. The dividend option offers Payout option, Reinvestment option, Weekly reinvestment option, Fortnightly reinvestment option, Monthly reinvestment option, Annual reinvestment option, Monthly payout option, Annual payout option. Under the growth option, no dividend will be declared.

In case of weekly dividend reinvestment option, the record date for the declaration of dividend shall be every Tuesday; in case of fortnightly dividend reinvestment option, the record date shall be 14th and 28th of each month; in case of monthly dividend reinvestment or payout option, the record date shall be 25th of each month and in case of annual dividend reinvestment or payout option, the record date shall be March 20 of every year. Under the dividend option, a dividend may be declared by the Trustee, at its discretion, from time to time (subject to the availability of distributable surplus as calculated in accordance with the Regulations). If the investor does not clearly specify the choice of option at the time of investing, it will be treated as a growth option.

The AMC shall dispatch to the Unit Holders, the dividend warrants within 30 (thirty) days of the date of declaration of dividend. The dividend distribution procedure shall be in accordance with the Regulations.

If the investor does not clearly specify the choice of dividend payout or reinvestment options within the dividend option, he will be treated as having selected the reinvestment option.

Segregation of Illiquid Asset

Notwithstanding anything to the contrary contained in the SID of the Scheme, the following shall apply to all Unit Holders and shall form an integral part of the SID of the Scheme:

To protect the interests of Unit Holders of the Scheme, the Trustee Company and the Asset Management Company have segregated the assets held by the Scheme, comprising of a single security that is no longer investment grade and is currently illiquid in the market (“**Segregated Asset**”) from the other assets of the Scheme (“**Proposed Segregation**”) effective from and including September 28, 2015 (“**Segregation Effective Date**”).

Accordingly, the Trustee Company and the Asset Management Company have segregated the value represented by the Segregated Asset’s weightage in the aggregated net asset value (“**Scheme NAV**”) of the Scheme calculated as of the Segregation Effective Date from the NAV of the remaining assets of the Scheme. The NAV of the Units in the Scheme has fallen by the value of the Segregated Asset (as of the Segregation Effective Date).

All Unit Holders of the Scheme as of the Record Time in their existing plans would have received proportionate units (“**Units - Segregated Asset**”) to reflect their interest in the value of the Segregated Asset calculated as of the Segregation Effective Date. The Units - Segregated Asset represents an interest, and separately identifies such interest, in the Segregated Asset. The Units - Segregated Asset is of growth option. The total value of all the units held by all of the Unit Holders (i.e. comprising the Units and the Units - Segregated Asset) immediately following the Proposed Segregation **remains the same** as the Scheme NAV of the Scheme immediately prior to the Proposed Segregation. “Record Time” shall mean the opening of business hours (i.e. 9 a.m. (IST)) on September 28, 2015, being the time at which all Unit Holders whose names are on the Scheme’s register shall be considered for the purposes of determining the Unit Holders who will be entitled to the pro rata share in the Segregated Asset and thus the corresponding Units - Segregated Asset.

The net effect of the Proposed Segregation is that with effect from and following the Segregation Effective Date, for the Unit Holders of the Scheme as at the Record Time, the NAV of the Scheme will comprise of: (a) the NAV of the Scheme excluding the NAV of the Segregated Asset (“**New NAV**”); and (b) the NAV of the Segregated Asset. Therefore, going forward the Scheme NAV, which is published on a daily basis, shall be displayed in such format to show (a) the New NAV, and (b) the NAV of the Segregated Asset.

After the Record Time, new subscribers who have been allotted units in the Scheme have no right to, or interest in, the Segregated Asset, interest in which is held exclusively by the holders of Units - Segregated Asset. The new subscribers to the Scheme after the Record Time shall only receive units representing the assets of the Scheme excluding the Segregated Asset and the prevailing New NAV shall apply.

The Trustee Company and the Asset Management Company have ensured segregation of bank accounts and securities accounts between the Segregated Asset and the remaining assets of the Scheme. The Proposed Segregation does not create a new scheme or plan by the Trustee Company or the Asset Management Company.

Till such time that the Trustee Company decides otherwise, no further Units - Segregated Asset will be issued (hence no further subscriptions in Units - Segregated Asset can be made). Additionally, till such time that the Trustee Company decides otherwise, no redemption or switch-out of the Units - Segregated Asset is permissible. As and when cash becomes **available** from realization of the Segregated Asset (either fully or partly), a notification shall be issued by the Asset Management Company and investors can place a redemption/switch-out request for the redemption/switch-out of the Unit - Segregated Asset thereafter as determined by the Trustee Company and the Asset Management Company.

The “Minimum balance to be maintained and consequences of non maintenance” and “Minimum amount for Purchase / Redemption / Switches” requirements set out in Section III. “UNITS AND OFFER”, sub-section C. “Periodic Disclosures” in the SID of the Scheme shall not be applicable to Units - Segregated Asset.

The Trustee Company reserves the absolute right to modify the Proposed Segregation or implementation thereof or otherwise, in the event of liquidity or repayment/ realization of the Segregated Asset.

The Asset Management Company shall not charge any management fee in relation to the Units - Segregated Asset.

The terms and conditions set out above shall be equally applicable to the systematic investment, redemption and switch-out plans.
