    - ii. Supported rating of debt instruments (i.e. after factoring-in credit enhancement) is above investment grade.
  2. The above limits shall not be applicable on investments in securitized debt instruments.
  3. Investment by the Scheme in debt instruments, having credit enhancements backed by equity shares directly or indirectly, shall have a minimum cover of 4 times considering the market value of such shares.

Further, the investment in debt instruments having credit enhancements should be sufficiently covered to address the market volatility and reduce the inefficiencies of invoking of the pledge or cover, whenever required, without impacting the interest of the investors. In case of fall in the value of the cover below the specified limit, AMCs will initiate necessary steps to ensure protection of the interest of the investors.

	<ul style="list-style-type: none"> <li>The Scheme shall not invest more than 10% of its NAV of the debt portfolio of the scheme in such instruments having special features or as permitted by SEBI from time to time and as prescribed under SEBI circular SEBI/HO/IMD/DF4/CIR/P/2021/032 dated March 10, 2021 or such other circular issued by SEBI from time to time.</li> </ul> <p>There can be no assurance that the investment objective of the scheme will be realized.</p> <p>Pending deployment of funds of the Scheme in securities in terms of the investment objective of the Scheme, the AMC may park the funds of the Scheme in short term deposits of scheduled commercial banks, subject to the guidelines issued by SEBI vide its circular dated April 16, 2007, as amended from time to time.</p>
<b>RISK PROFILE OF THE SCHEME</b>	<p>Apart from the risk factors mentioned in SAI, following are some of the additional risk factors which investors are advised to go through before investing:</p> <p><b>a) STANDARD RISK FACTORS:</b></p> <ul style="list-style-type: none"> <li>* Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.</li> <li>* As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down</li> <li>* Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme.</li> <li>* Edelweiss Multi Asset Allocation Fund is only the name of the Scheme &amp; it does not in any manner indicate either the quality of the Scheme or its future prospects and returns.</li> <li>* The sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs.1,00,000 made by it towards setting up the Fund.</li> <li>* The Scheme is not a guaranteed or assured return Scheme</li> </ul> <p><b>b) SCHEME SPECIFIC RISK FACTORS:</b></p> <p>The performance of the Scheme may be affected by changes in Government policies, general levels of interest rates and risks associated with trading volumes, liquidity and settlement systems, etc. Some of the Risks are listed below:</p> <p><b>1. Risk Factors Associated with Equity &amp; Equity related instruments</b></p> <ul style="list-style-type: none"> <li>The value of the Scheme's investments may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, etc.</li> <li>Settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. The Scheme may face liquidity risk or execution risk or redemption risk or the risk of NAV going below par.</li> <li>Investments in equity and equity related securities involve a degree of risk and investors should not invest in the Scheme unless they can afford to take the risk of losing their investment. The liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date for disinvestment.</li> <li>Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. The AMC may</li> </ul>

choose to invest in unlisted securities that offer attractive yields within the regulatory limit. This may however increase the risk of the portfolio.

- At times, taking benefit of investing in Special Situations may involve certain risks like the promoter may choose not to accept the discovered prices or the Regulatory hurdles may delay any specific corporate action. For details, please refer SAI.
- Though the constituent stocks of most indexes are typically liquid, liquidity differs across stocks. Due to the heterogeneity in liquidity in the capital market segment, trades on this segment may not get implemented instantly.

## **2. Risks Associated with investing in Debt and Money Market Instruments**

- **Interest rate Risk:** Price of a fixed income instrument generally falls when the interest rates move up and vice-versa. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- **Credit risk or default Risk:** Credit risk is the risk that the issuer of a debenture/ bond or a money market instrument may default on interest and/or principal payment obligations. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government Securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.
- **Liquidity & Settlement Risk:** The liquidity of a fixed income security may change, depending on market conditions, leading to changes in the liquidity premium attached to the price of such securities. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio. Different segments of the financial markets have different settlement cycle/periods, and such settlement cycle/periods may be impacted by unforeseen circumstances, leading to Settlement Risk. This can adversely affect the ability of the Fund to swiftly execute trading strategies which can lead to adverse movements in NAV.
- **Reinvestment Risk:** Interest rates may vary from time to time. The rate at which intermediate cash flows are reinvested may differ from the original interest rates on the security, which can affect the total earnings from the security.
- **Performance Risk:** Performance of the Scheme may be impacted with changes in factors, which affect the capital market and in particular the debt market.
- **Prepayment Risk:** The Scheme may receive payment of monthly cashflows earlier than scheduled, which may result in reinvestment risk.
- **Market Risk:** Lower rated or unrated securities are more likely to react to developments affecting the market as they tend to be more sensitive to changes in economic conditions than higher rated securities.

There can be no assurance that a Scheme's investment objectives will be achieved, or that there will be no loss of capital. Investment results may vary substantially on a monthly, quarterly, or annual basis.

**Risk associated with investments in Gold & Silver ETF and related instruments:**

**A. Several factors that may affect the price of gold/commodity are as follows:**

Global gold supplies and demand, which is influenced by factors such as forward selling by gold producers, purchases made by gold producers to unwind gold hedge positions. Productions and cost levels in major gold producing countries can also impact gold prices. Further, Central bank purchases and sales also impact the price of Gold. The prices of gold are also affected:-

- Macro-economic factors - Expected rate of inflation versus actual may impact the price of gold. Global or regional political, economic or financial events and situations of countries can also impact price and demand / supply
- Central banks' sale: Central banks across the world hold a part of their reserves in gold. The quantum of their sale in the market is one of the major determinants of gold prices. A higher supply than anticipated would lead to subdued gold prices and vice versa. Central banks buy gold to augment their existing reserves and to diversify from other asset classes. This acts as a support factor for gold prices.
- Mining & Production - Lower production could have a positive effect on gold prices. Conversely excessive production capacities would lead to a downward movement in gold prices as the supply goes up.
- Currency exchange rates - A weakening dollar may act in favour of gold prices and vice versa
- Changes in indirect taxes or any other levies - The gold held by the Custodian may be subject to loss, damage, theft or restriction of access due to natural event or human actions
- Seasonal demand: Demand for Gold in India is closely tied to the production of jewellery which tends to increase ahead of festive seasons. Any factor impacting the seasonal demand will impact the prices of gold Gold Regulatory risk - Movement/trade of gold that may be imposed by RBI. Trade and restrictions on import/export of gold or gold jewellery etc may also impact prices and demand/supply
- Market Liquidity: Trading in Gold ETF on the Exchange may be halted because of market conditions or for reasons that in the view of the market authorities or SEBI, trading in Gold ETF is not advisable. In addition, trading in Gold and Gold ETF is subject to trading halts caused by extraordinary market volatility and pursuant to Stock Exchange(s) and SEBI "circuit filter" rules. There can be no assurance that the requirements of the market necessary to maintain the listing of Gold ETF will continue to be met or will remain unchanged. Gold ETF may suffer liquidity risk from domestic as well as international market.

The returns from gold may underperform returns from the various general securities markets or different asset classes other than gold. Different types of securities tend to go through cycles of out-performance and underperformance in comparison to the general securities markets.

The scheme may invest in Gold ETFs. The units may trade above or below their NAV. The NAV of the underlying Scheme will fluctuate with changes in the market value of the holdings. The trading prices will fluctuate in accordance with changes in their NAV as well as market supply and demand. However, given that units of Gold ETFs can be created and redeemed in Creation Units, it is expected that large discounts or premiums to the NAV will not sustain due to arbitrage opportunity available. The value of Gold ETFs Units could decrease if unanticipated operational or trading problems arise.

In case of investment in Gold ETFs, the scheme can subscribe to the units of Gold ETFs according to the value equivalent to unit creation size as applicable. If subscriptions received are not adequate enough to invest in creation unit size, the subscriptions may be deployed in debt and money market instruments which will have a different return profile compared to gold returns profile.

**Several factors that may affect the price of Silver are as follows:**

Global Silver supplies and demand, which is influenced by factors such as forward selling by silver producers, purchases made by Silver producers to unwind Silver hedge positions, government regulations, productions and cost levels in major Silver producing countries.

- Liquidity risk: Trading in units of the ETFs on the Exchange may be halted because of market conditions or for reasons that in view of the Exchange authorities or SEBI, trading in units of the scheme is not advisable. In addition, trading in units is subject to trading halts caused by extraordinary market volatility and pursuant to Stock Exchange(s) and SEBI "circuit filter" rules as applicable from time to time
- Regulatory Risk: Any changes in trading regulations by the stock exchange (s) or SEBI may affect the ability of Authorised Participant/ Large Investor to arbitrage resulting into wider premium/ discount to NAV. Any changes in any other regulation relating to import and export of silver or silver jewellery (including customs duty, sales tax and any such other statutory levies) may affect the ability of the scheme to buy/sell silver against the purchase and redemption requests received
- Macro-economic indicators - Investors' expectations with respect to the macro economic indicators may vary from actuals. Price volatility in Silver as a commodity will be much higher because of the industrial use of it Global or regional political, economic or financial events and situations may also impact the price and demand / supply of the commodity
- Currency exchange rates - The formula for deriving the NAV of the units of the ETFs is based on the imported (landed) value of the silver, which is computed by multiplying international market price by US Dollar value. Hence the value of NAV or silver will depend upon the conversion value and attracts all the risk associated with such conversion.
- Investment and trading activities of hedge funds and commodity funds;
- In addition, investors should be aware that there is no assurance that Silver will maintain its long-term value. In the event that the price of silver declines, the value of investment in units is expected to decline proportionately.

**4. Risk factors associated with Derivatives**

**i) General Risk Factors associated with derivatives:**

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Fund Manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

Trading in derivatives has the following risks:

- An exposure to derivatives in excess of the hedging requirements can lead to losses.

- An exposure to derivatives, when used for hedging purpose, can also limit the profits from a genuine investment transaction.
- Derivatives carry the risk of adverse changes in the market price.
- Illiquidity Risk i.e. risk that a derivative trade may not be executed or reversed quickly enough at a fair price, due to lack of liquidity in the market.

The Fund may use derivatives instruments like equity futures & options, or other derivative instruments as permitted under the Regulations and Guidelines. Usage of derivatives will expose the Scheme to liquidity risk, open position risk, and opportunities risk etc. Such risks include the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. In case, of the derivative strategies, it may not be possible to square off the cash position against the corresponding derivative position at the exact closing price available in the Value Weighted Average Period. Debt derivatives instruments like interest rate swaps, forward rate agreements or other derivative instruments also involve certain risks. For details, please refer SAI.

**4. Risk associated with investing in exchange traded commodity derivatives Commodity risks**

The Fund may invest on in commodities markets and may therefore have investment exposure to the commodities markets and one or more sectors of the commodities markets, which may subject the Fund to greater volatility than investments in traditional securities, such as stocks and bonds. Volatility in the commodities markets may be caused by changes in overall market movements, domestic and foreign political and economic events and policies, war, acts of terrorism, changes in domestic or foreign interest rates and/or investor expectations concerning interest rates, domestic and foreign inflation rates, investment and trading activities of mutual funds, hedge funds and commodities funds, and factors such as drought, floods, weather, livestock disease, embargoes, tariffs and other regulatory developments, or supply and demand disruptions. Because the Fund's performance is linked to the performance of volatile commodities, investors should be willing to assume the risks of potentially significant fluctuations in the value of the Fund's shares.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of investment strategies depends upon the ability of the fund manager(s) to identify such opportunities which may not be available at all times. Identification and execution of the strategies to be pursued by the fund manager(s) involve uncertainty and decision of fund manager(s) may not always be profitable. No assurance can be given that the fund manager(s) will be able to identify or execute such strategies.

**Systemic Risks**

Systemic risks which may be witnessed while trading in Indian Commodities Market are liquidity risk, market risk in terms of volatility, Exchange Risk and counterparty risks.

Settlement Risk - Risks pertaining to settlement of Commodity Derivatives vide Physical Delivery of goods

- Incremental margin / cost to be borne- The Commodity exchanges have robust settlement process like the equity exchanges. However, there are rules and timelines which need to be complied with, failing which delivery of the commodity will need to be taken. This will lead to incremental cost to procure the commodity. Avoidance of the same will lead to the exchange penalizing the buyer or the seller or both depending on the type of commodity being dealt with.

- Risk Factors in case settlement of Derivatives vide Physical Delivery of goods - Timelines to dispose off the physical goods, loss due to damage, inadequate insurance.

If the Commodities futures position passes its last square off date or the 'Intention' is missed to be provided before the Delivery Intention period, the buyer or the seller will be allocated delivery of the commodity. Thus, there emerges a risk of holding goods in physical form at the warehouses. Though the commodity is inclusive of insurance cost, there is a small deductible in each claim which is not payable by the Insurance company.

#### **5. Risks Associated with exposure in Tri-party Repo**

Risk of exposure in the Tri-party Repo settlement Segment provided by CCIL emanates mainly on two counts –

- Risk of failure by a lender to meet its obligations to make funds available or by a borrower to accept funds by providing adequate security at the settlement of the original trade of lending and borrowing under Tri-party Repo transaction.
- Risk of default by a borrower in repayment.

#### **6. Risks Associated with Stock Lending & Short Selling:**

##### **i) Risks associated With Stock Lending**

The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. It may be noted that this activity would have the inherent probability of collateral value drastically falling in times of strong downward market trends, rendering the value of collateral inadequate until such time as that diminution in value is replenished by additional security. It is also possible that the borrowing party and/or the approved intermediary may suddenly suffer severe business setback and become unable to honour its commitments. This, along with a simultaneous fall in value of collateral would render potential loss to the Scheme. Besides, there can be temporary illiquidity of the securities that are lent out and the Scheme will not be able to sell such lent-out securities until they are returned. There is also a possibility of opportunity loss.

##### **ii) Risks associated with short selling**

Scheme may enter into short selling transactions, subject to SEBI and RBI regulations in the matter. This will be done if the fund management team is of the view that there exists an opportunity to make trading gains. Calls for short selling will be taken after considering the liquidity, price movement & volatility of the security by the fund management team. There can be a loss in such a transaction if the price of the security goes up instead of falling down.

#### **7. Risk factors associated with Repo transactions in Corporate Debt:**

##### **i) Lending transactions:**

The scheme may be exposed to counter party risk in case of repo lending transactions in the event of the counterparty failing to honour the repurchase agreement. However, in repo lending transactions, the collateral may be sold and a loss is realized only if the sale price is less than the repo amount. The risk may be further mitigated through over-collateralization (the value of the collateral being more than the repo amount). Further, the liquidation of underlying securities in case of counterparty default would depend on liquidity of the securities and market conditions at that time. It is endeavoured to mitigate the risk by

following an appropriate counterparty selection process, which include their credit profile evaluation and over-collateralization to cushion the impact of market risk on sale of underlying security.

**ii) Borrowing transactions:**

In the event of the scheme being unable to pay back the money to the counterparty as contracted, the counter party may dispose of the assets (as they have sufficient margin). This risk is normally mitigated by better cash flow planning to take care of such repayments. Further, there is also a Credit Risk that the Counterparty may fail to return the security or Interest received on due date. It is endeavoured to mitigate the risk by following an appropriate counterparty selection process, which include their credit profile evaluation.

**8. Risks associated with writing covered call options for equity shares**

- Writing call options are highly specialized activities and entail higher than ordinary investment risks. In such investment strategy, the profits from call option writing is capped at the option premium, however the downside depends upon the increase in value of the underlying equity shares. This downside risk is reduced by writing covered call options.
- The Scheme may write covered call option only in case it has adequate number of underlying equity shares as per regulatory requirement. This would lead to setting aside a portion of investment in underlying equity shares. If covered call options are sold to the maximum extent allowed by regulatory authority, the scheme may not be able to sell the underlying equity shares immediately if the view changes to sell and exit the stock. The covered call options need to be unwound before the stock positions can be liquidated. This may lead to a loss of opportunity, or can cause exit issues if the strike price at which the call option contracts have been written become illiquid. Hence, the scheme may not be able to sell the underlying equity shares, which can lead to temporary illiquidity of the underlying equity shares and result in loss of opportunity.
- The writing of covered call option would lead to loss of opportunity due to appreciation in value of the underlying equity shares. Hence, when the appreciation in equity share price is more than the option premium received the scheme would be at a loss.
- The total gross exposure related to option premium paid and received must not exceed the regulatory limits of the net assets of the scheme. This may restrict the ability of Scheme to buy any options.

**9. Risk Factors Associated with Investments in REITs and InvITs:**

- **Market Risk:** REITs and InvITs are volatile and prone to price fluctuations on a daily basis owing to market movements. Investors may note that AMC/Fund Manager's investment decisions may not always be profitable, as actual market movements may be at variance with the anticipated trends. The NAV of the Scheme is vulnerable to movements in the prices of securities invested by the scheme, due to various market related factors like changes in the general market conditions, factors and forces affecting capital market, level of interest rates, trading volumes, settlement periods and transfer procedures.
- **Liquidity Risk:** As the liquidity of the investments made by the Scheme(s) could, at times, be restricted by trading volumes and settlement periods, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk.
- **Reinvestment Risk:** Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or dividend pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.

	<p>The above are some of the common risks associated with investments in REITs &amp; InvITs. There can be no assurance that a Scheme's investment objectives will be achieved, or that there will be no loss of capital. Investment results may vary substantially on a monthly, quarterly or annual basis.</p> <p><b>10. Risk Factors Associated with Investments in Foreign Securities</b></p> <p>Investments in International (overseas) securities including Exchange Traded Funds involves increased risk and volatility, not typically associated with domestic investing,</p> <p><b>Some of the risk associated are :</b></p> <ul style="list-style-type: none"> <li>• Changes in currency exchange rates</li> <li>• Foreign government regulations</li> <li>• Differences in auditing and accounting standards</li> <li>• Political and economic instability</li> <li>• Liquidity and volatile prices</li> <li>• Economic deterioration, and changes in bi-lateral relationships.</li> </ul> <p>The investment by the Scheme in overseas securities and overseas ETFs is subject to compliance with the industry-wide limit as stipulated by RBI/SEBI from time to time. The Scheme may not be able to make investment in overseas securities and overseas ETFs in case of breach of such industry-wide overseas limits. In such a situation, the performance of the Scheme could be affected.</p> <p><b>11. Risks Associated with segregated portfolio</b></p> <ol style="list-style-type: none"> <li>a) Unit holder holding units of Segregated Portfolio may not able to liquidate their holdings till the recovery of money from the issuer.</li> <li>b) Portfolio comprising of Segregated Portfolio may not realise any value or may have to be written down.</li> <li>c) Listing of units of Segregated Portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.</li> </ol>

  - Application Form not accompanied by KYC Application Form or letter / acknowledgment issued by KRA may be rejected by the Fund. SEBI circular dated January 24, 2013 on identification of Beneficial Ownership has prescribed a uniform approach to be followed for determination of beneficial owners. A 'Beneficial owner' is defined as a natural person/s who ultimately own, control or influence a client and/or persons on whose behalf a transaction is being conducted, which includes persons who exercise ultimate effective control over a legal person or arrangement.  
All categories of investors except individuals, company listed on a stock exchange or majority owned subsidiary of such company, are requested to provide details about beneficial ownership in the Application Forms for all their investments. ## XVII. FATCA DETAILS:

The Foreign Account Tax Compliance Act is a United States (US) federal law, aimed at prevention of tax evasion by US Citizens and Residents ("US Persons") through use of offshore accounts. The FATCA provisions were included in the HIRE Act enacted by the US legislature. FATCA is designed to increase compliance by US taxpayers and is intended to bolster efforts to prevent tax evasion by the US taxpayers with offshore investments.

As per SEBI circular no. CIR/MIRSD/2/2014 dated June 30, 2014, the Government of India and the US have reached an agreement in substance on the terms of an Inter-Governmental Agreement ("IGA") to implement the FATCA provisions, which have become globally applicable from July 1, 2014. FATCA requires enhancement of due diligence processes by the Foreign Financial Institutions ("FFI") so as to enable identification of US reportable accounts.

The Fund/Edelweiss Asset Management Limited ("the AMC") are likely to be classified as a FFI under the FATCA provisions, in which case the Fund /the AMC would be required, from time to time, to (i) undertake necessary due diligence process by collecting information/ documentary evidence of the US/non US status of the investors; (ii) disclose/report information as far as may be legally permitted about the holdings/investment returns pertaining to reportable accounts to the US Internal Revenue Service and/or such Indian authorities as may be specified under FATCA or other applicable laws and (iii) carry out such other activities as prescribed under the FATCA provisions, as amended from time to time.

FATCA due diligence will have to be directed at each investor/unit holder (including joint investors) and on being identified as a reportable person/specified US person, all the folios will be reported. Further, in case of folio with joint investors, the entire account value of investment portfolio will be attributable under each such reportable person. Investors/Unit holders would therefore be required to furnish such information to the Fund/AMC, from time to time, in order to comply with the reporting requirements stated in the IGA and or circulars/guidelines issued by SEBI/AMFI in this regard.

The impact of FATCA is relevant not only at the point of on-boarding of the investors but also throughout the life cycle of the investor account / folio with the Fund. Hence investor(s) should immediately intimate the Fund/AMC, in case of any change in the FATCA related information provided by them at the time of initial subscription.

The Fund/AMC reserves the right to reject any application or compulsorily redeem the units held directly or beneficially in case the applicant/investor fails to furnish the relevant information and/or documentation or is found to be holding units in contravention of the FATCA provisions.

Investors are advised to consult their tax advisors to understand the FATCA requirements and its implications in relation to their investment.
