BHARAT Bond ETF – April 2025

Investment Objective

The investment objective of the scheme is to track the Nifty BHARAT Bond Index – April 2025 by investing in bonds of AAA-rated CPSEs/CPSUs/ CPFIs and other Government organizations, subject to tracking errors.

However, there is no assurance that the investment objective of the Scheme will be realized and the Scheme does not assure or guarantee any returns.

Asset Allocation Pattern

Under normal circumstances, it is anticipated that the asset allocation shall be as follows:

Asset Class	Indicative Allocation (% to net assets)	Risk Profile
#Debt Securities issued by CPSEs/ CPSUs/CPFIs and other Government organizations which are part of Nifty BHARAT Bond Index – April 2025	95% to 100%	Low to Medium
Government Securities maturing on or before maturity date of the Scheme, TREPS and REPO in government bonds	0% to 5%	Low

#Pursuant to SEBI Circular no. SEBI/HO/IMD/DF3/CIR/P/2019/147 dated November 29, 2019, replication of the Index by the Scheme shall be as follows:

- The Scheme shall replicate the index completely.
- In the event, if the condition laid down in para (a) above is not feasible due to non-availability of issuances of the issuer forming part of the index, the Scheme may invest in other issuances issued by the same issuer having deviation of +/- 10% from the weighted average duration of issuances forming part of the index, subject to single issuer limit of 15%. Further, at aggregate portfolio level, the duration of the Scheme shall not deviate +/- 5% from the duration of the index.
- In the event, if the conditions laid down in para (a) and para (b) above are not feasible, the Scheme shall invest in issuances of other issuer(s) within the index having duration, yield and credit rating in line with that of the non-available issuances of the issuer(s) forming part of the index, subject to single issuer limit of 15%. The duration of the Scheme shall not deviate +/- 5% from the duration of the index.
- In the event, if the conditions laid down in para (a), para (b) and para (c) above are not feasible, the Scheme shall invest in issuances of issuer(s) not forming part of the index with duration, yield and credit rating in line with that of the non-available issuances of issuer(s) forming part of the index. Such investment in issuances of issuer(s) not forming part of the index shall be maximum of 20% of the aggregate portfolio of the Scheme.
- The rationale for any deviation from para (a) above shall be recorded.
- In an event where the credit rating of an issuance falls below the investment grade or rating mandated in the index methodology, rebalancing by the Scheme shall be done within a period of 5 working days.

It may be noted that after the closure of the NFO Period/pending deployment of the funds of the Scheme, the Scheme may park the funds in Government Securities maturing on or before the maturity date of the Scheme, TREPS and/or REPO in government bonds until the full deployment in securities issued by eligible issuers is achieved.

The Scheme may engage in Stock Lending in accordance with SEBI guidelines in this regard. Not more than 20% of the net assets of the Scheme would generally be deployed in stock lending.

The cumulative gross exposure through all the debt securities should not exceed 100% of the net assets of the scheme. However, cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.

The AMC would monitor the tracking error of the Scheme on periodic basis and would seek to minimize tracking error to the maximum extent possible. Under normal circumstances, the AMC will endeavour that the tracking error of the Scheme does not exceed 2% per annum.

The Scheme does not intend to undertake/ invest/ engage in:

- Derivatives;
- Repos in corporate debt securities;
- Short selling of securities;
- Unrated instruments (except TREPS/ Government Securities/ Repo in Government Securities);
- Foreign securities/ADR/GDR;
- Securitised debts;
- Fund of Fund Schemes; and
- Credit Default Swaps.

Maturity Date of the Scheme:

The Scheme will mature on April 15, 2031. If such a Maturity Date is a non-Business Day, the subsequent Business Day shall be considered as the Maturity Date for the Scheme.

It may be noted that the Scheme will be suspended for trading on exchange closer to its Maturity Date not more than 10 business day before the Maturity Date. A notice in this regard shall be issued to the investors.

Risk Profile of the Scheme

The performance of the Scheme may be affected by changes in Government policies, general levels of interest rates and risks associated with trading volumes, liquidity and settlement systems, etc. Some of the risks are listed below:

1. Risks Associated with Fixed Income and Money Market Instruments:

- **Interest rate risk:** Price of a fixed income instrument falls when the interest rates move up and vice-versa, which will affect the NAV accordingly.
- **Spread risk:** Investments in corporate bonds are exposed to the risk of widening of the spread between corporate bonds and gilts. Prices of corporate bonds tend to fall if this spread widens which will affect the NAV of the Scheme accordingly.
- **Credit risk or default risk:** Credit risk is the risk that the issuer of a debenture/ bond or a money market instrument may default on interest &/or principal payment obligations.
- **Liquidity:** The Risk of non execution of sale/purchase order due to low volumes is liquidity risk.
- **Reinvestment risk:** Interest rates may vary from time to time. The rate at which intermediate cash flows are reinvested may differ from the original interest rates on the security, which can affect the total earnings from the security.
- **Performance Risk:** Performance of the Scheme may be impacted with changes in factors, which affect the capital market and in particular the debt market.
- **Market risk:** Lower rated or unrated securities are more likely to react to developments affecting the market as they tend to be more sensitive to changes in economic conditions than higher rated securities.

2. Risk Factors associated with Exchange Traded Fund investing in Bonds:**i. Lack of Vibrant Secondary Market for Units of the Scheme:**

Although the Units of the Scheme will be listed on the Stock Exchanges such as NSE & BSE, there can be no assurance that a vibrant secondary market for units of the Scheme will be developed or maintained by the Authorised Participants.

ii. Halting of Trading in Units of the Scheme:

Trading in the Units of the Scheme on NSE & BSE may be halted because of market conditions or for reasons that in view of NSE & BSE, SEBI or any other Regulatory authorities. Thus, active trading in the units of the Scheme is not advisable.

In addition, trading of the Units of the Scheme are subject to trading halts caused by extraordinary market volatility and pursuant to stock exchange and SEBI 'circuit filter' rules.

There can be no assurance that the requirements of NSE & BSE necessary to maintain the listing of the Units of the Scheme will continue to be met or will remain unchanged.

iii. Lack of secondary market depth:

In case of unit creation and unit redemption, the Scheme will have to either buy a basket of securities or sell a basket of securities. This requires an active secondary market for underlying securities at all points of time. A lack of depth in secondary market for underlying securities could hamper the efficient transaction in unit creation and unit redemption.

iv. Units of the scheme may trade at prices other than NAV:

Depending on the demand-supply dynamic, the units of the Scheme may either trade on the Stock Exchange above or below the NAV of the Scheme. This may give rise to arbitrage opportunities. However, the in-built mechanisms of unit creation and unit redemption in the form of Cash or in-kind is designed to reduce the arbitrage opportunity for market participants.

v. Regulatory Risk:

Any changes in Regulations by SEBI / RBI / Stock Exchange / GOI / and other decision makers may hamper the ability of the market participants in trading resulting into wider premium/discount to NAV.

vi. Asset Class Risk:

The returns from the types of Securities in which the Scheme invests may under-perform returns of general Securities markets or different asset classes. Different types of securities tend to go through cycles of out-performance and under-performance in comparison of Securities markets.

vii. Redemption Risk:

Investors should note that even though the Scheme is an open-ended Scheme, subscription/redemptions of Units of the Scheme directly with the Fund would be limited to such investors who have the ability to subscribe/redeem the units of the Scheme in specific Creation Size. Generally, these lot sizes are larger as compared to normal funds. Thus, even though this Scheme is open ended, due to large lot size, very few investors can directly subscribe and redeem the units of the Scheme. However, investors wishing to subscribe/redeem units in other than specific lot sizes can do so by buying/selling the same on NSE & BSE.

The AMC will endeavor to pay the redemption proceeds in Cash. However depending on the market volatility, liquidity conditions, applicable regulatory provisions, investor request etc., the AMC may redeem the Units and make the payout either "in-kind" i.e. through slice of the entire bond Portfolio or in combination of both i.e. Cash and "in-kind".

viii. Risk of Investment Strategy

As the Scheme would be primarily investing in the Bonds of CPSE or any other eligible entities, any government policy which will have an impact on central public sector enterprises, including any change in the disinvestment policy of the government, could impact the price of the underlying assets. This may have negative impact on the performance of the Scheme.

ix. Risk of Credit Rating changes

It is understood that most of the CPSE securities have higher credit rating essentially due to government ownership and implied government support. Any potential change in government control, shareholding pattern, market perception, corporate action etc., could result in potential downgrade of credit rating of the Issuers. This may have negative impact on the performance of the Scheme.

x. Risk of Investment in eligible securities

The Scheme's objective is to invest in CPSEs securities as defined in the Index. The Scheme will invest in the securities predominantly through private placement route. These securities are generally auctioned on Electronic Bidding Platforms (EBP) in anonymous manner through competitive bidding. It is quite possible that the Scheme may not be able to subscribe to these securities in sufficient quantities. This may result in sub-optimal asset allocation until the next bidding takes place.

xi. Risk of variation in asset allocation as compared to the Index

The Scheme intends to accept "in-kind" unit creation request from investors. The criteria for securities eligible for "in-kind" subscription has been defined in this document. It is possible that the "in-kind" subscription may result in variation in asset allocation as compared to the Index asset allocation. However, the rebalancing provisions of the SEBI Regulations will be applicable.

xii. **Risk of sovereign rating change**

The valuation of the CPSE securities is based on the shape of the sovereign bond yield curve. The level of sovereign bonds are, apart from other factors, dependent on the sovereign rating of India by global Credit Rating Agencies. Any potential change in India's sovereign credit rating may have direct impact on the levels of sovereign bonds which in turn may have impact on the CPSE securities.

xiii. **Risk of higher supply of CPSEs securities**

There has been an increase in total issuances of CPSE securities in last 3 years. This has resulted in "crowding out effect" in the corporate bond market. As a result, credit spreads of certain CPSE issuers with higher supply have widened as compare to other CPSE issuers. This has also resulted in higher concentration for certain CPSE issuers resulting in lack of appetite. Any incremental issuance from these CPSEs is likely to be met with lukewarm response from the investors, resulting in further widening of credit spreads.

xiv. **Lack of supply of eligible securities with desired maturity**

The target maturity bond ETF structure has a pre-defined maturity date. This necessitate investment in securities maturing within 3 months before the maturity date of the Scheme. Any decline in potential supply of securities maturing within 3 months before the maturity date of the Scheme may expose the Scheme to the reinvestment risk or investing in lower yielding TREPS in the maturing year of the Scheme. This may be detrimental to the investor interest.

xv. **Increase in supply of Tax-free bonds from CPSEs Issuers**

The target maturity bond ETF structure is designed to provide investor with long-term fixed income asset allocation to high qualities CPSEs with better tax-adjusted returns in the current interest rate environment. Any potential increase in supply of Tax-free bonds from CPSEs issuer may adversely impact the demand and future growth of the Scheme.

xvi. **Risk of divergence in credit rating of the Scheme and the Index**

The Scheme intends to invest in AAA rated CPSEs entities. Any potential credit rating downgrade will necessitate the Scheme to sell bonds of downgraded CPSEs entities at market level and invest in new AAA rated CPSEs entities. This exercise is dependent on the secondary market liquidity in affected CPSEs entities. In case if the Scheme is unable to liquidate these bonds in the open market, this will result in divergence in the credit rating composition between the Scheme and the Index.

xvii. **Risk of disinvestment / privatization of invested CPSE entities**

The GOI has recently made several announcements regarding their intentions to either disinvest full or part of their holdings in several CPSE entities. In case if a CPSE entity, which is part of the portfolio, is privatized, it will result in exclusion from the Index. The Scheme will also be required to exit their positions at the prevailing market levels and reinvest the proceeds in CPSE entities at prevailing market levels. This may result in untoward volatility and undesirable outcome.

3. Risks associated with investing in Tri Party Repo through CCIL (TREPS):

Risk of exposure in the Triparty Repo settlement Segment provided by CCIL emanates mainly on two counts -

- Risk of failure by a lender to meet its obligations to make funds available or by a borrower to accept funds by providing adequate security at the settlement of the original trade of lending and borrowing under Triparty Repo transaction.
- Risk of default by a borrower in repayment.

4. Risk associated with Stock Lending

The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. It may be noted that this activity would have the inherent probability of collateral value drastically falling in times of strong downward market trends, rendering the value of collateral inadequate until such time as that diminution in value is replenished by additional security. It is also possible that the borrowing party and/or the approved intermediary may suddenly suffer severe business setback and become unable to honor its commitments. This, along with a simultaneous fall in value of collateral would render potential loss to the Scheme. Besides, there can be temporary illiquidity of the securities that are lent out and the scheme will not be able to sell such lent out securities until they are returned. There is also a possibility of opportunity loss.

5. Risks Associated with Segregated Portfolio

- Unit holder holding units of Segregated Portfolio may not be able to liquidate their holdings till the recovery of money from the issuer.
- Portfolio comprising of Segregated Portfolio may not realise any value or may have to be written down.
- Listing of units of Segregated Portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.
