RISK PROFILE OF THE SCHEME	Apart from the risk factors mentioned in SAI, following are some of the additional risk factors which investors are advised to go through before investing:
	a) STANDARD RISK FACTORS:
	 Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal. As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down
	* Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future
	 performance of the Scheme. Edelweiss Nifty Alpha Low Volatility 30 Index Fund is only the name of the Scheme & it does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
	 The sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs.1,00,000 made by it towards setting up the Fund. The Scheme is not a guaranteed or assured return Scheme.
	b) SCHEME SPECIFIC RISK FACTORS: The performance of the Scheme may be affected by changes in Government policies, general levels of interest rates and risks associated with trading volumes, liquidity and settlement systems, etc. Some of the Risks are listed below:
	 Risk Factors Associated with Equity & Equity related instruments The value of the Scheme's investments may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, etc.

Settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. The Scheme may face liquidity risk or execution risk or redemption risk or the risk of NAV going below par.

Investments in equity and equity related securities involve a degree of risk and investors should not invest in the Scheme unless they can afford to take the risk of losing their investment. The liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date for disinvestment.

Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. The AMC may choose to invest in unlisted securities that offer attractive yields within the regulatory limit. This may however increase the risk of the portfolio.

At times, taking benefit of investing in Special Situations may involve certain risks like the promoter may choose not to accept the discovered prices or the Regulatory hurdles may delay any specific corporate action. For details, please refer SAI.

2. Risks Associated with investing in Debt and Money Market Instruments

Edelweiss Nifty Alpha Low Volatility 30 Index Fundwill invest not less than 95% of its corpus in the securities representing the Nifty Alpha Low Volatility 30 Index as this Scheme endeavors to earn returns that closely correspond to the total returns represented by the Nifty Alpha Low Volatility 30 Index . The Scheme will have insignificant cash or debt/money market investments. Therefore, the scheme is not significantly susceptible to risks associated with debt/money markets. Risks associated with debt/money market instruments are as under:

- Interest rate Risk: Price of a fixed income instrument generally falls when the interest rates move up and vice- versa. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.
- **Credit risk or default Risk:** Credit risk is the risk that the issuer of a debenture/ bond or a money market instrument may default on interest and/or principal payment obligations. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government Securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.

	 Liquidity & Settlement Risk: The liquidity of a fixed income security may change, depending on market conditions leading to changes in the liquidity premium attached to the price of such securities. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio. Different segments of the financial markets have different settlement cycle/periods and such settlement cycle/periods may be impacted by unforeseen circumstances, leading to Settlement Risk. This can adversely affect the ability of the Fund to swiftly execute trading strategies which can lead to adverse movements in NAV. Reinvestment Risk: Interest rates may vary from time to time. The rate at which intermediate cash flows are reinvested may differ from the original interest rates on the security, which can affect the total earnings from the security. Performance Risk: Performance of the Scheme may be impacted with changes in factors, which affect the capital market and in particular the debt market. Prepayment Risk: Lower rated or unrated securities are more likely to react to developments affecting the market as they tend to be more sensitive to changes in economic conditions than higher rated securities Risk Factors associated with Scheme:
	3. Risk Factors associated with Scheme:
	a. <u>Passive Investments:</u> As the scheme proposes to invest not less than 95% of the net assets in the securities of the benchmark Index, the Scheme will not be actively managed. The Scheme may be affected by a general decline in the Indian markets relating to its Underlying Index. The Scheme invests in the securities included in its underlying index regardless of their investment merit. The AMC does not attempt to individually select stocks or to take defensive positions in declining markets.
	b. Tracking Error and Tracking Difference Risk:
	Tracking Error and Tracking difference is to measure divergence of the performance (return) of the Fund's portfolio from that of the Underlying Index. Tracking error / Tracking difference are inherent in any index fund and such errors may cause the schemes to generate returns which are not in line with the performance of the Nifty Alpha Low Volatility 30 Index or one or more securities covered by / included in the Nifty Alpha Low Volatility 30 Index . That said, the risk parameters of the portfolio of the Scheme and underlying index would be similar. Tracking Error / Tracking Difference may arise from a variety of factors including but not limited to:
:	1. Any delay in the purchase or sale of shares due to illiquidity in the market, settlement and realisation of sales proceeds, delay in credit of securities or in receipt and consequent reinvestment of dividends, etc.
:	 The index reflects the prices of securities at a point in time, which is the price at close of business day on National Stock Exchange of India Limited (NSE). The scheme, however, may trade the securities at different points in time during the trading
	session and therefore the prices at which the scheme trades may not be identical to

	opt to trade the same securities on different exchanges due to price or liquidity
	factors, which may also result in traded prices being at variance from NSE closing
	prices.
3.	The potential of trades to fail may result in the scheme not having acquired the
	security at the price necessary to mirror the index.
4.	Transaction and other expenses, such as but not limited to brokerage, custody,
	trustee and investment management fees.
5.	Being an open-ended scheme, the scheme may hold appropriate levels of cash or cash
	equivalents to meet on going redemptions.
6.	The scheme may not be able to acquire or sell the desired number of securities due to
	conditions prevailing in the securities market, such as, but not restricted to circuit
	filters in the securities, liquidity and volatility in security prices.
•	Due to the reasons mentioned above and other reasons that may arise, it is expected
	that the scheme may have a tracking error not to exceed by of 2% per annum from its
	Benchmarks.
•	However, it needs to be clearly understood that his is just an indicative range and that
	the actual tracking error can be higher or lower than the range given.
Λ	Risk factors associated with Derivatives
	rivative products are leveraged instruments and can provide disproportionate gains as
	ell as disproportionate losses to the investor. Execution of such strategies depends upon
	e ability of the Fund Manager to identify such opportunities. Identification and
	ecution of the strategies to be pursued by the fund manager involve uncertainty and
	cision of fund manager may not always be profitable. No assurance can be given that
the	e fund manager will be able to identify or execute such strategies.
ть	e risks associated with the use of derivatives are different from or possibly greater than,
	e risks associated with investing directly in securities and other traditional investments.
Th	e Fund may use derivatives instruments like equity futures & options, or other
	rivative instruments as permitted under the Regulations and Guidelines. The scheme
	Il be using non-hedging strategy
VI	in be using non-neuging strategy
Co	mmon risk associated with Trading in derivatives:
a.	Exposure risk: An exposure to derivatives can lead to losses. Derivatives carry the risk
	of adverse changes in the market price.
b.	Illiquidity Risk i.e. risk that a derivative trade may not be executed or reversed quickly
	enough at a fair price, due to lack of liquidity in the market.
с.	Execution Risk - The prices which are seen on the screen need not be the same at
L.	which execution will take place.
d.	Mark to Market Risk - There could be a market to market loss that would arise and
u.	
	additional margin may need to be provided for the same.
e.	Basis Risk - In extraordinary circumstances, the Fund Manager may have to unwind
	positions before the expiry at a basis which maybe higher than the initiation basis to
	meet redemptions. Premature unwinding of the position might result in the locked-in
	profits not getting realized.
f.	Tracking Error Risk - Corporate actions such as demergers might result in the weights

	of the index sto	cks to change. This might lead to a tr	acking error	affecting the returns			
	to a certain extent.						
	5. Risks Associated with exposure in Tri-party Repo						
	Risk of exposure in the Tri-party Repo settlement Segment provided by CCIL emanates						
	mainly on two counts –						
		a. Risk of failure by a lender to meet its obligations to make funds available or by borrower to accept funds by providing adequate security at the settlement of the
